Cataloging 1 / 1

OpenBiblio offers several ways to get your materials into your catalog.

1 Copy cataloging

- 1. Click Cataloging.
- 2. Click New Item.
- 3. Type or scan an ISBN. If you are unable to find any results using an ISBN, you can use the dropdown menus to try other search criteria.
- 4. If it finds a catalog record from a different library, it will fill in all the fields that it can, based on the media type and information from the other library.
- 5. Make sure that the call number is correct.

If you are seeing the wrong type of call number (e.g. you see a LoC call number when your library uses Dewey Decimal), somebody with admin privileges will need to change the Admin \rightarrow Online Options settings.

- 6. Click Submit.
- 7. Enter copy information as needed. Click Update.

2 Original cataloging

Instructions coming soon

3 Importing MARC records

By default, the MARC record importer imports items as a "test load," so you can verify that there are no errors. You can set "test load" to false once you are satisfied with your settings and file.

4 Importing CSV records

Instructions coming soon.

5 Bulk delete records

This functionality does not yet exist.
